

# Reservelt! Schematic Diagram

**1** Reservelt! updates agenda JPGs each update cycle (1-10 minutes) for every room, and saves the files on a web server...

The web service can be either Apache or I.I.S. and can be on the same computer as Reservelt! or on a separate computer as shown here.

The computer running Reservelt! can be a physical computer, or a virtual machine.

**2** The web server has a separate folder for each room in the building. The files for that room appear at the following URL paths:

`http://0.0.0.0/RCONTENT/Room_Name/index.smil`  
OR for web browsers:  
`http://0.0.0.0/RCONTENT/Room_Name/index.html`

(Note: The actual IP address is substituted for 0.0.0.0 above.)

**3** The SMIL media player for each room is "aimed" at the content location via the "Content Source" menu on the player. It "pulls" the latest content for the room every minute.
